

CONNECTING YOUR IBM i IN REAL TIME

# Eradani Connect™

API-Enablement with Eradani

It just works.

## Open Up Your IBM i to the Interconnected World

API-enablement opens up your IBM i to a world of infinite possibilities. With Eradani Connect's API-enablement capabilities and bi-directional connectors, you easily extend and connect your legacy IBM i applications to real-time data and web services, taking advantage of the plethora of APIs available today.

## See the Infinite Possibilities

### Application Integration

Integrate applications, share data across platforms, and connect externally with customers' and business partners' systems

### Notifications and Alerts

Deliver real time automated alerts, messaging, and/or emails to customers and partners with pertinent updates

### Modern UI/UX

Delight end users and customers by rapidly building and easily maintaining the latest in responsive Web and mobile user interfaces

### Popular Third-Party APIs

Integrate data from public APIs like geolocation data, transportation tracking, weather data, currency conversion, and more

### IoT Monitoring and Control

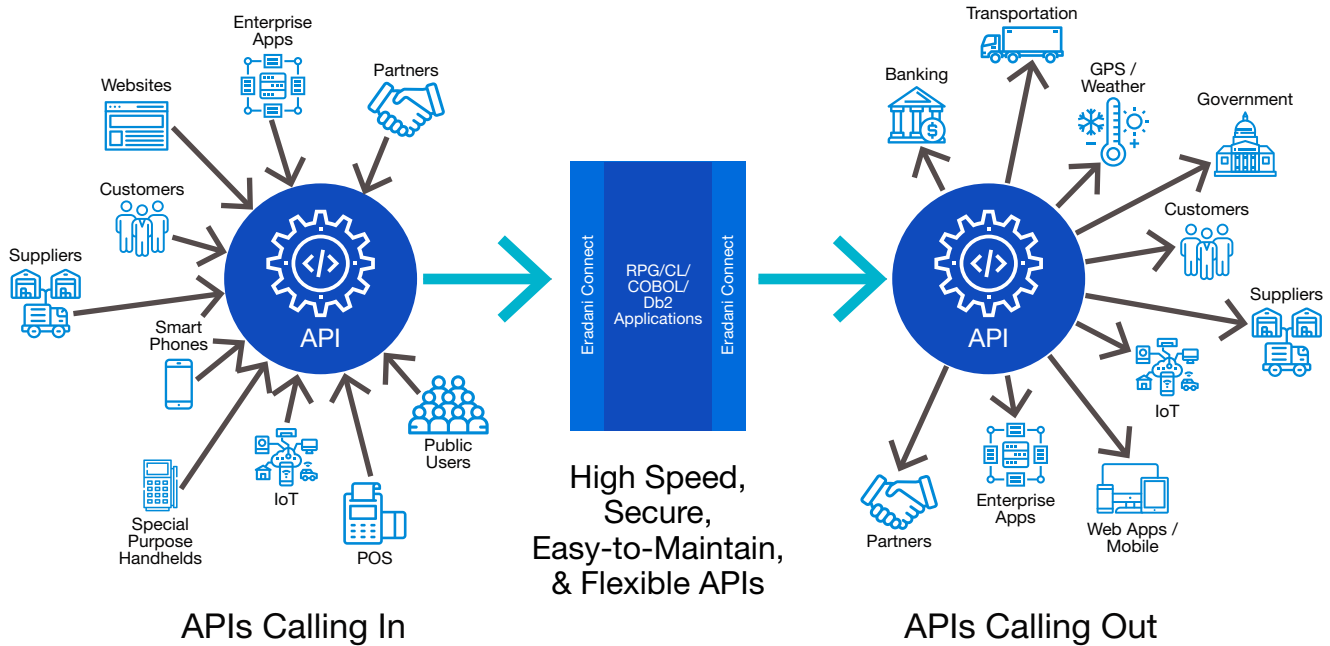

Easily manage Internet of Things equipment by gathering data from the field and updating monitoring devices right from your RPG programs

### Mobile/Handhelds/POS Integration

Provide anywhere, anytime access and share data via API access to IBM i data and applications

**POSSIBILITIES**  
WITH API-ENABLEMENT

# Take Advantage of APIs to Modernize Your IBM i Applications

With Eradani Connect, you can rapidly make your IBM i applications more exciting, easy to use, easy to connect, and feature rich. Eradani Connect provides a high speed, secure connection layer that makes it simple to call RPG/COBOL programs, CL commands, and stored procedures and provide access to IBM i data right from Open Source languages like JavaScript, Python, .Net, Java and PHP.

- Create the latest in user experiences and easily connect them to your core IBM i applications
- Be more responsive by making APIs available to your customers and business partners so their applications can interact directly with your systems
- Integrate applications from other platforms with your IBM i applications
- Connect your applications directly to Internet of Things devices

Importantly, Eradani Connect provides bidirectional API support. So, in addition to API-enabling your applications for others to access, you can call out directly from RPG, COBOL, or CL to Open Source code and web services with just a few lines of code.

- Pull information directly from your transportation providers on demand
- Get geolocation information and traffic information from Google
- Query inventory availability and place orders with your supply chain partners
- Access the latest weather forecast
- Download and use any of the millions of Open Source components available for plugging into your application

It's just that easy.
